

The TR CC Knee

Your solution for full range knee recovery by combining motion, cold therapy, and compression.

Top Shelf Orthopedics introduces an innovative approach to straight forward relief with the TR CC Knee brace.

The TR CC Knee

During the recovery phase following knee surgery, prioritizing the reduction of swelling and pain while preserving full range of motion is crucial.

Unlike conventional cold compression bracing, which doesn't allow critical full extension, the **TR CC Knee** is an innovative hinged knee brace, with its patent-pending design, that offers a comprehensive solution to post operative/post injury knee treatment. It facilitates a complete range of motion while concurrently administering cold therapy and compression.

By addressing swelling and pain effectively, it encourages patients to maintain a straight, fully extended leg, thereby preventing the occurrence of flexion contractures.

Indications:

- Post Knee Surgery
- Post Knee Injury

Features and Benefits:

- ROM hinges set a protected range of motion and medial/lateral stability
- Pneumatic compression technology for edema and pain control
- Includes 2 flexible ice packs for cold therapy to help ensure patient compliance
- Anterior wrap-around design for easy application
- Universally sized for left or right leg
- PDAC approval for L1832/1833
- Latex-free
